

Pre-Training Assessment

Transact-SQL and Python Programming Training Course

Course Details

Course Title	Transact-SQL and Python Programming Training Course
Training Dates	Jun 22, 2026 - Jul 03, 2026
Training Venue	Trainingcred Training Center, Cape Town South Africa

Participant Information

Full Name	Lydia Libete
Job Title / Position	Knowledge Managements Specialist
Organization	Central Bank of Lesotho
Department	Research
Email	llibete@centralbank.org.ls
Phone	+266 59148035

1 Understanding Your Goals

PRIMARY REASONS FOR ATTENDING

Acquiring New Skills/Knowledge

EDUCATIONAL BACKGROUND

Master's Statistics

YEARS OF PROFESSIONAL EXPERIENCE

15 years

2 Professional Context

SKILLS & KNOWLEDGE TO GAIN

I need to be able gain knowledge in python programing for data analysis and extracting data from databases using SQL or python. I have no knowledge of the two languages

MOST VALUABLE MODULES

All the Modules seem like a valuable skill for me as a beginner in all of them. However most interesting skill for me as a statistician who has never used python are from modules: Python Data Manipulation and Database Connectivity, Statistical Analysis and Data Visualization with Python, Automated Reporting and Workflow Integration, API Integration and External Data Sources.

CHALLENGES TO ADDRESS

Yes we want to automate our workflows from data collection up to a dissemination point, and use best practices to extract data from internal and external data sources and also produce reproducible reports for our periodical reports so the skills gained here will address those challenges.

3 Post-Training Goals & Application

POST-TRAINING GOALS

I want to gain knowledge to be able to automate the workflows from collecting data, compiling, analyzing and disseminating. to be able to extract data from external and internal data sources or databases. Also to be able to produce reproducible reports using python.

IMMEDIATE APPLICATIONS

We are currently building a Data Management Section in the Research Department. There is a project to build the Enterprise Data Warehouse and I want to gain knowledge of how I will contribute as a statistician in that project. We are also tasked to produce reproducible periodical reports and I think Python skill will help in that regards.

SPECIFIC PROJECTS

Contributing as a Statistician in the Development of the Data Warehouse. Automating workflows from using the Manual Excel Processes.. Producing reproducible reports.

PERFORMANCE METRICS

By being able to automate my work processes, being able to produce reports using SQL and python. Being able to analyze data using python, and being able to extract data from internal and external databases and manipulate it with python

4 Further Learning Interests

LEARNING INTERESTS

Since I am a beginner, I would like to further to advanced training after acquiring this skills and being able to put in in practice.

DATA TOOLS & SOFTWARE USED

Yes I work with Excel files from collecting macroeconomic data up to disseminations

CURRENT SKILL LEVEL**Beginner****ADDITIONAL COMMENTS**

The trainer should make the course beginner friendly while also adding value
